Seventh Grade Faces the Future.

Elementary

It is not enough to have the memory of the great men of the past. We must have the memory of the great deeds they did. We must have the memory of the great spirit of man which is the heart, the backbone, the spirit of man, and it must be daily earned and refreshed.

work a 60-hour week for 25 cents an hour?

That was the going rate at the turn of the century when almost all work was done by hand. Youth began their working careers at 14, there was no such thing as retirement and living standards were very low.

Today, the average U.S. worker has tripled his production and buying power and has cut his work week by one-third.

What changed all this? Machines, automation and modern production and business methods.

Automation creates more jobs than it destroys. It's the free enterprise way and has given us the highest standard of living in the world and the greatest degree of individual freedom.

At I&M automated methods have enabled us to provide many more new jobs, improve our methods of generating and delivering electricity and provide our customers with improved, low-cost electric service in the bargain.
